Subject: comments on consultaion on implementation model, bharat net -reg

To: kapilhanda@traigov.in

sir,

India should not be compared to other country models on national broadband policy. If BOOT model is implemented in india the very cause of "digital india program" of providing broadband to all citizens at affordable price will get effected badly. An example of TOLL PLAZAS BOOT model where a middle class people fear to buy a car as toll plaza fares has to be paid at every 50 KM distance.

The CPSU led model (BSNL,MTNL) is best suited in india which provide broadband to every village at affordable price. These PSU should be encouraged to get its employees and officers more disciplined and answerable. They should be given powers to protect its underground OFC and copper cable.
